Question 7(c) \Rightarrow Given $\begin{pmatrix} 4 & 2 \\ -1 & 1 \end{pmatrix} M = 6I$, where M is a matrix and I is unit matrix of order 2×2 .

- (i) State the order of matrix M
(ii) Find the matrix M

solution (i)

$$\Rightarrow \begin{pmatrix} 4 & 2 \\ -1 & 1 \end{pmatrix} M = 6I \quad (1)$$

here I is unit matrix.

we have to find order of matrix M

let the order the matrix M is

$$\Rightarrow a \times b$$

we know that for multiply two matrix their order must be in the form of (x,y) (y,z) here $x, y, z \in N$ hence order of matrix will be $2 \times b$.
so overall left hand side order is

$$\Rightarrow (2 \times 2) \times (2 \times b) = (2 \times b)$$

for comparing LHS=RHS their order must be same so

order of LHS= $(2 \times b)$, RHS= (2×2) hence b = 2.

hence the order of matrix M is (2×2) .

solution (ii)

$$A = \begin{pmatrix} 4 & 2 \\ -1 & 1 \end{pmatrix} \quad (2)$$

$$AM = 6I \quad (3)$$

multiply by A^{-1}

$$M = A^{-1} \times 6I$$

$$\therefore I \times M = M \quad (4)$$

as we know that $A \times I = I \times A^{-1}$

$$\left(\begin{array}{cc|cc} 4 & 2 & 1 & 0 \\ -1 & 1 & 0 & 1 \end{array} \right) \quad (5)$$

$$R_2 \rightarrow 4R_2 + R_1$$

$$\left(\begin{array}{cc|cc} 4 & 2 & 1 & 0 \\ 0 & 6 & 1 & 4 \end{array} \right) \quad (6)$$

$$R_1 \rightarrow 3R_1 - R_2$$

$$\left(\begin{array}{cc|cc} 12 & 0 & 2 & -4 \\ 0 & 6 & 1 & 4 \end{array} \right) \quad (7)$$

$$R_1 \rightarrow \frac{R_1}{2}$$

$$\left(\begin{array}{cc|cc} 6 & 0 & 1 & -2 \\ 0 & 6 & 1 & 4 \end{array} \right)$$

$$\left(\begin{array}{cc|cc} 1 & 0 & \frac{1}{6} & \frac{-2}{6} \\ 0 & 1 & \frac{1}{6} & \frac{4}{6} \end{array} \right)$$

$$A^{-1} = \begin{pmatrix} \frac{1}{6} & \frac{-1}{3} \\ \frac{1}{6} & \frac{2}{3} \end{pmatrix}$$

by calculation we get

$$A^{-1} = \begin{pmatrix} \frac{1}{6} & \frac{-1}{3} \\ \frac{1}{6} & \frac{2}{3} \end{pmatrix} \quad (8)$$

$$6I = \begin{pmatrix} 6 & 0 \\ 0 & 6 \end{pmatrix} \quad (9)$$

by calculation we get

$$M = \begin{pmatrix} 1 & -2 \\ 1 & 4 \end{pmatrix} \quad (10)$$
